Experience

Cisco – Software Engineer – Raleigh, NC *Jun 2024 – Jul 2026*

- Managed on-call rotations for 14 internal **OpenShift** clusters, performing incident response and troubleshooting to maintain infrastructure availability and ensure high system reliability.
- Engineered **LangGraph** AI agents that automatically execute diagnostic commands, investigate live alerts, and generate root cause analysis documentation, reducing manual on-call investigation time by 65%.
- Developed and launched time-series **ML** models on **OpenShift AI** using data sourced from **Grafana** to detect cross-cluster anomalies and configuration bugs, improving system-wide proactive incident detection.
- Optimized **Jenkins** pipelines using a dual-layer (**Docker** base/app) build strategy, eliminating redundant package installations and accelerating CI/CD execution speeds by 50%.
- Led vulnerability remediation for 10+ core repositories using **SonarQube** and **Corona** (SAST/SCA), achieving a 100% resolution rate of high-severity security flaws.

Amazon Web Services – Software Engineer Intern – Seattle, WA *May 2023 – Aug 2023*

- Developed a generative AI chatbot using **LangChain** and **React** on **AWS Lambda**, enabling **semantic search** to eliminate manual document lookup and accelerate knowledge retrieval.
- Engineered a **RAG** pipeline to ingest documents from **S3** into a **Chroma** vector database containerized on **EC2** instance, enabling efficient semantic retrieval and automated context injection for Large Language Model queries.
- Evaluated and experimented with diverse foundation models and text-embedding architectures using **Amazon SageMaker**, benchmarking performance metrics to select optimal models for downstream generative AI tasks.

220C Banh Mi & Coffee – Software Engineer – Charlotte, NC *Mar 2021 – Sep 2022*

- Architected and launched a full-stack web application for online food ordering using **React**, **Express**, and **Node.js**, raising monthly transactions by 15% and expanding digital reach.
- Integrated **Stripe API** for secure payment processing and implemented real-time **MongoDB** data synchronization, leading to a 30% improvement in user engagement and customer retention.
- Deployed the backend on **Heroku** and frontend on **Netlify** while managing daily production monitoring, maintaining 99.9% uptime and resolving system alerts under 15 minutes.
- Built an automated SMS notification system via **Stripe** webhooks and the **Gmail API**, instantly texting new orders to kitchen staff to eliminate email delays and cut prep times by 20%

TIAA – Software Engineer Intern – Charlotte, NC *Jun 2022 – Aug 2022*

- Developed a **Django** survey platform to collect team requirements, utilizing an **NLP** engine to match survey responses with a knowledge base of optimal data analytics tools.
- Engineered custom web scrapers with **Selenium** to aggregate data from diverse technical resources, building the comprehensive knowledge base used for automated tool recommendations.

Novozymes – Software Engineer Intern – Franklinton, NC *Feb 2022 – Dec 2022*

- Optimized codebase efficiency by developing reusable **Django** UI components, eliminating code duplication and centralizing maintenance across multiple internal applications.
- Improved software reliability by implementing automated unit tests and integrating them into **GitLab CI/CD** pipelines, significantly reducing debugging time and manual oversight.

Technical Skills

- Python, Java, JavaScript, TypeScript, React, Next.js, Node.js, Express, LangChain, LangGraph, Flask, Django
- AWS, OpenShift, Docker, Kubernetes, Jenkins, GitLab, Argo CD, CI/CD, SQL, MongoDB, PostgreSQL
- Grafana, Postman, SonarQube, SAST, SCA, Corona, Firebase, Podman, Microservices, MLOps, Git

Certifications

- Certified Kubernetes Application Developer (CKAD) Jul 2025 – Jul 2027

Education

University of North Carolina at Charlotte – Bachelor of Science in Computer Science
